

## Local Employment Dynamics (LED) Program

The Local Employment Dynamics (LED) program is an innovative new state/federal partnership with the U.S. Census Bureau and Idaho Commerce & Labor to provide new demographic employment information called **Quarterly Workforce Indicators (QWIs)**.

Local decision makers - employers, workers, transportation agencies, education and training institutions, and economic development agencies - need current, local data to make decisions. The new Quarterly Workforce Indicators (QWIs) series provides just that.

**Quarterly Workforce Indicators** offer:

- Information that is local to the county or metropolitan area, so that decisions can be made in the right context.
- Information on employment and wages in different industries is now available by age and gender, so you know where the jobs are and what people are getting paid.
- Dynamic information on the changing economy is now available through job destruction and creation measures, as well as, turnover and long-term industry trends.

*Employers* can understand where workers live as well as where they have worked.

*Suppliers* can use trends on business job creation and destruction - by industry and by location - to decide where to locate.

*Educational and training institutions* can examine earnings for new and incumbent workers in different industries to benchmark their performance and improve their placement strategies

*Job seekers* can see which types of businesses are hiring workers of their age, what they're paying, and what the growth trends are.
